

## DATA SHEET

### CLEANING COOKED LANDS PARFEUILLES 0820

#### *ELIMINATE THE RASHES OF CEMENT.*

After the complete drying of the ground, rashes of cement appear, it is necessary to delete them. Of this operation depends the success of a beautiful finish.

It is important after the installation terra-cottas to let well dry the ground. The time of drying depends on the season and on the ambient temperature that is to say an artificial drying, an overheating of the room can entail inconveniences (a superficial drying causes ascents(rises) of humidity). We have to let make the time.

It is necessary to have: of 0820 CLEANING terra-cottas, rubber gloves, sponge, wide brush or wooden spatula(spoonbill).

This preparation is made by small successive surfaces.

#### APPLICATION:

We apply the Scouring agent terra-cottas 0820 pure or diluted according to the degree of the rashes and the cement to be removed of 20 % > of pure, by means of a sponge or of a pine.

#### RINSING :

Rinse abundantly in the water several times to remove the Scouring agent terra-cottas. To facilitate the rinsing to use a vacuum cleaner with water which will avoid the re-testimony of the limestone.
